

Capability Working Group

Perspectives Analysis Sub-Group

Presented on behalf of the Sub-Group by
Michael Henshaw, Duncan Kemp, Alan
Harding, Peter Lister

Perspectives Analysis Sub-Group Members

- Duncan Kemp
- Michael Henshaw
- Peter Lister
- Alan Harding
- Andrew Daw
- Andrew Farncombe
- Malcolm Touchin
- David Wright
- Derek Price

INTRODUCTION

History

- Autumn Assembly 2008 – is capability an important area for INCOSE UK?
- UWE 2009 – Capability Working Group meets
 - Diversity of views
- Dec. 2009 – Perspectives Analysis Sub-Group formed
- Sept. 2010 – White Paper published

Agenda

- Capability is a multiply-defined word
 - Data collection: capture the weltanschauungen of capability engineering
 - Analysis: Mapping the weltanschauungen and creation of an Entity Relationship Diagram for capability
 - Conclusions: Position statements about capability engineering and recommendations for CWG

WORLDVIEWS

The Weltanschauungen of Capability and Capability Engineering

Which is your view?

What do you see?

Young children see
Dolphins

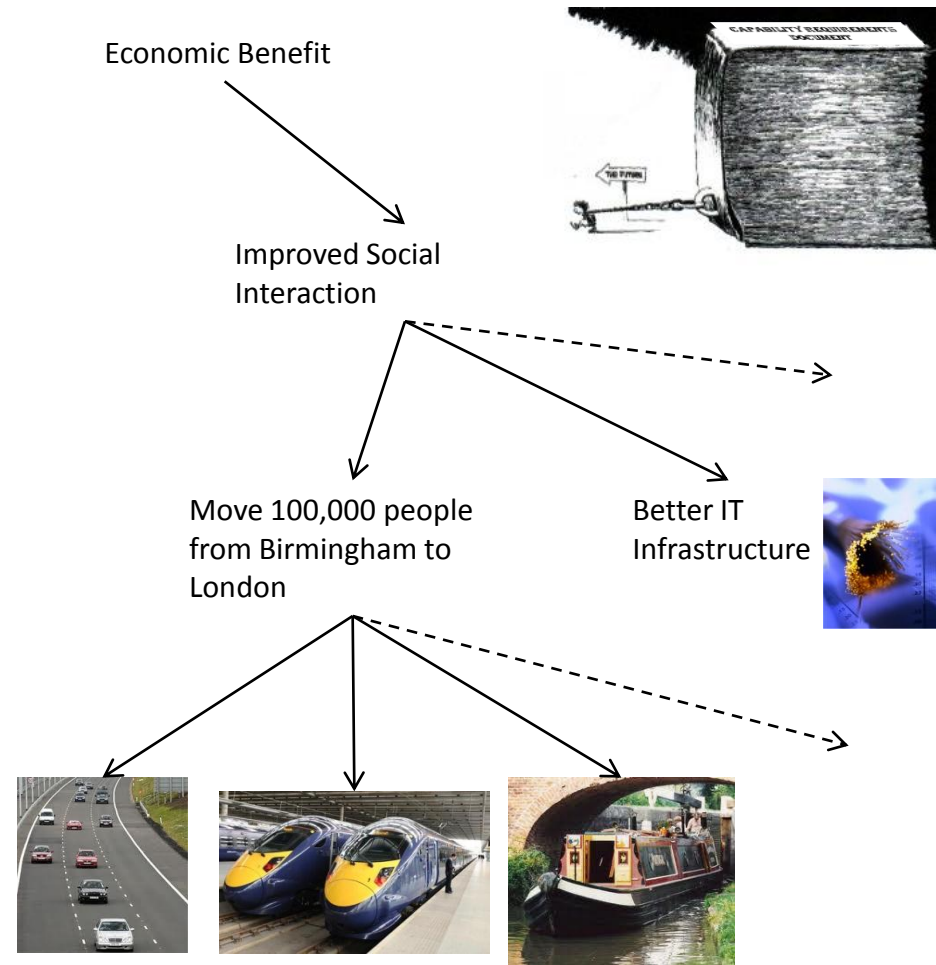

W1: Equipment Capability

- Weltanschauung: **Equipment has capability**
- *Described by a system in which:*
- *A buyer defines the needs of users against which suppliers design and develop equipment that has capability, which assumes the user's skill, the effectiveness of the supply chain and the equipment's maintained state at the time at which the capability is realised.*

W2: Capability Planning

- Weltanschauung: **“Capability” describe solution independent requirements**
- Described by a system in which:
- *A buyer attempts to translate a set of explicit user wants into a written set of solution independent requirements within the constraints of procurement policy, against which a supplier may generate system design options to satisfy the capability need, that is defined and constrained by the context in which the equipment is used, the user’s skill, the effectiveness of the supply chain and the equipment’s maintained state at the time at which the capability is realised.*

W3: Capability Trade-off

- Weltanschauung: **Deciding / balancing in which capability to invest**
- Described by a system in which:
- *A planner or strategist continually and continuously determines capability needs and the funds available, and an architect designs a programme to deliver systems to meet the capability needs, in order to decide in which capabilities fund holders should invest to achieve an overall capability balanced across users' needs, within the constraints of the pertaining political environment, commercial structures (supply chain) and taking account of existing systems.*

W4A: Service Capability

- Weltanschauung: **Delivering specific business services**
- Described by a system in which:
- *A service Provider delivers specific business services to a Service Recipient (e.g. a passenger); achieved by the provider, users, and functional responsible person defining the quality of service required, designing the service, transitioning capability components into service, operating the service, and continuously improving the service, in line with the provider's strategic plans and the extant operating conditions.*

W4b: Contingent Service Capability

- Weltanschauung: **Developing fallback services to be used at a future date**
- Described by a system in which:
- *A service Provider designs and develops specific fallback services for a Service Recipient (e.g. a passenger); achieved by the provider, users, and functional responsible person defining the quality of service required, designing the fallback service, and storing for transition of capability components into service, operating the service in line with the provider's strategic plans and the extant operating conditions.*

Table 52

This service is withdrawn and Newshorpe, Eastwood & Langley Hill, Jacksdale, Pye Hill & Somercoates, and Pinxton (South) stations are closed. The locality is served by omnibuses operated by the Midland General Omnibus Co. Ltd., Nottingham

Commences 6th July

On 7th September dep King's Cross 11 50 am and Peterborough 1 17 pm

Via Market Rasen and Lincoln (Central) and (Central)

Via Market Rasen, Lincoln (St. Marks) and Lincoln

In England, winter is an unplanned emergency that occurs every year

W5: Dynamic Capability Reconfiguration

- Weltanschauung: **Reconfiguring available assets, people and processes quickly to meet current circumstances**
- Described by a system in which:
- *A user understands that circumstances have changed and picks, modifies and implements the most appropriate plan to meet the specific circumstances by reconfiguring the available assets, people and processes within an appropriate timeframe to meet the current circumstances.*

W6: Capability Systems Engineering

- Weltanschauung: **Developing a capability (all Components of Capability) solution**
- Described by a system in which:
- *An enterprise of users, suppliers, and buyers develop and operate a capability solution across (and incorporating) all contributing components, by deploying all appropriate systems engineering approaches/techniques to understand the problem, investigate options, develop, integrate, transition to service, operate, maintain, renew, upgrade and dispose of the components that together meet the need.*

W7: Enterprise Planning

- Weltanschauung: **Managing the interdependencies between capabilities**
- Described by a system in which:
- *Strategists (supported by all CoC Owners) develop, maintain and ensure implementation of an integrated plan in order to manage the interdependencies between all CoC changes, across all capabilities, and all business service delivery in order to support strategy, finance, and CoC owners.*

W8a: Organisational Capability

- Weltanschauung:
Organisations have capability
- *Described by a system in which:*
- *an organisation controls resources that it can configure to maximise its performance in the creation, by its employees, of products and/or services that are desired by consumers/users, in order to maximise the return on investment of its shareholders (stakeholders).*

W8b: Relational Capability

- **Weltanschauung: Capabilities emerge through processes of interaction between individuals, groups and organizations**
- Described by a system in which:
- *consumers of products and services benefit from improved commercial offerings of companies whose operational capabilities are enhanced through the relationships with their supply chains; the overall capability of the supply chain being revealed through the interactions between the organisations within the supply chain that represents an extended knowledge enterprise.*

The concepts of Capability Engineering

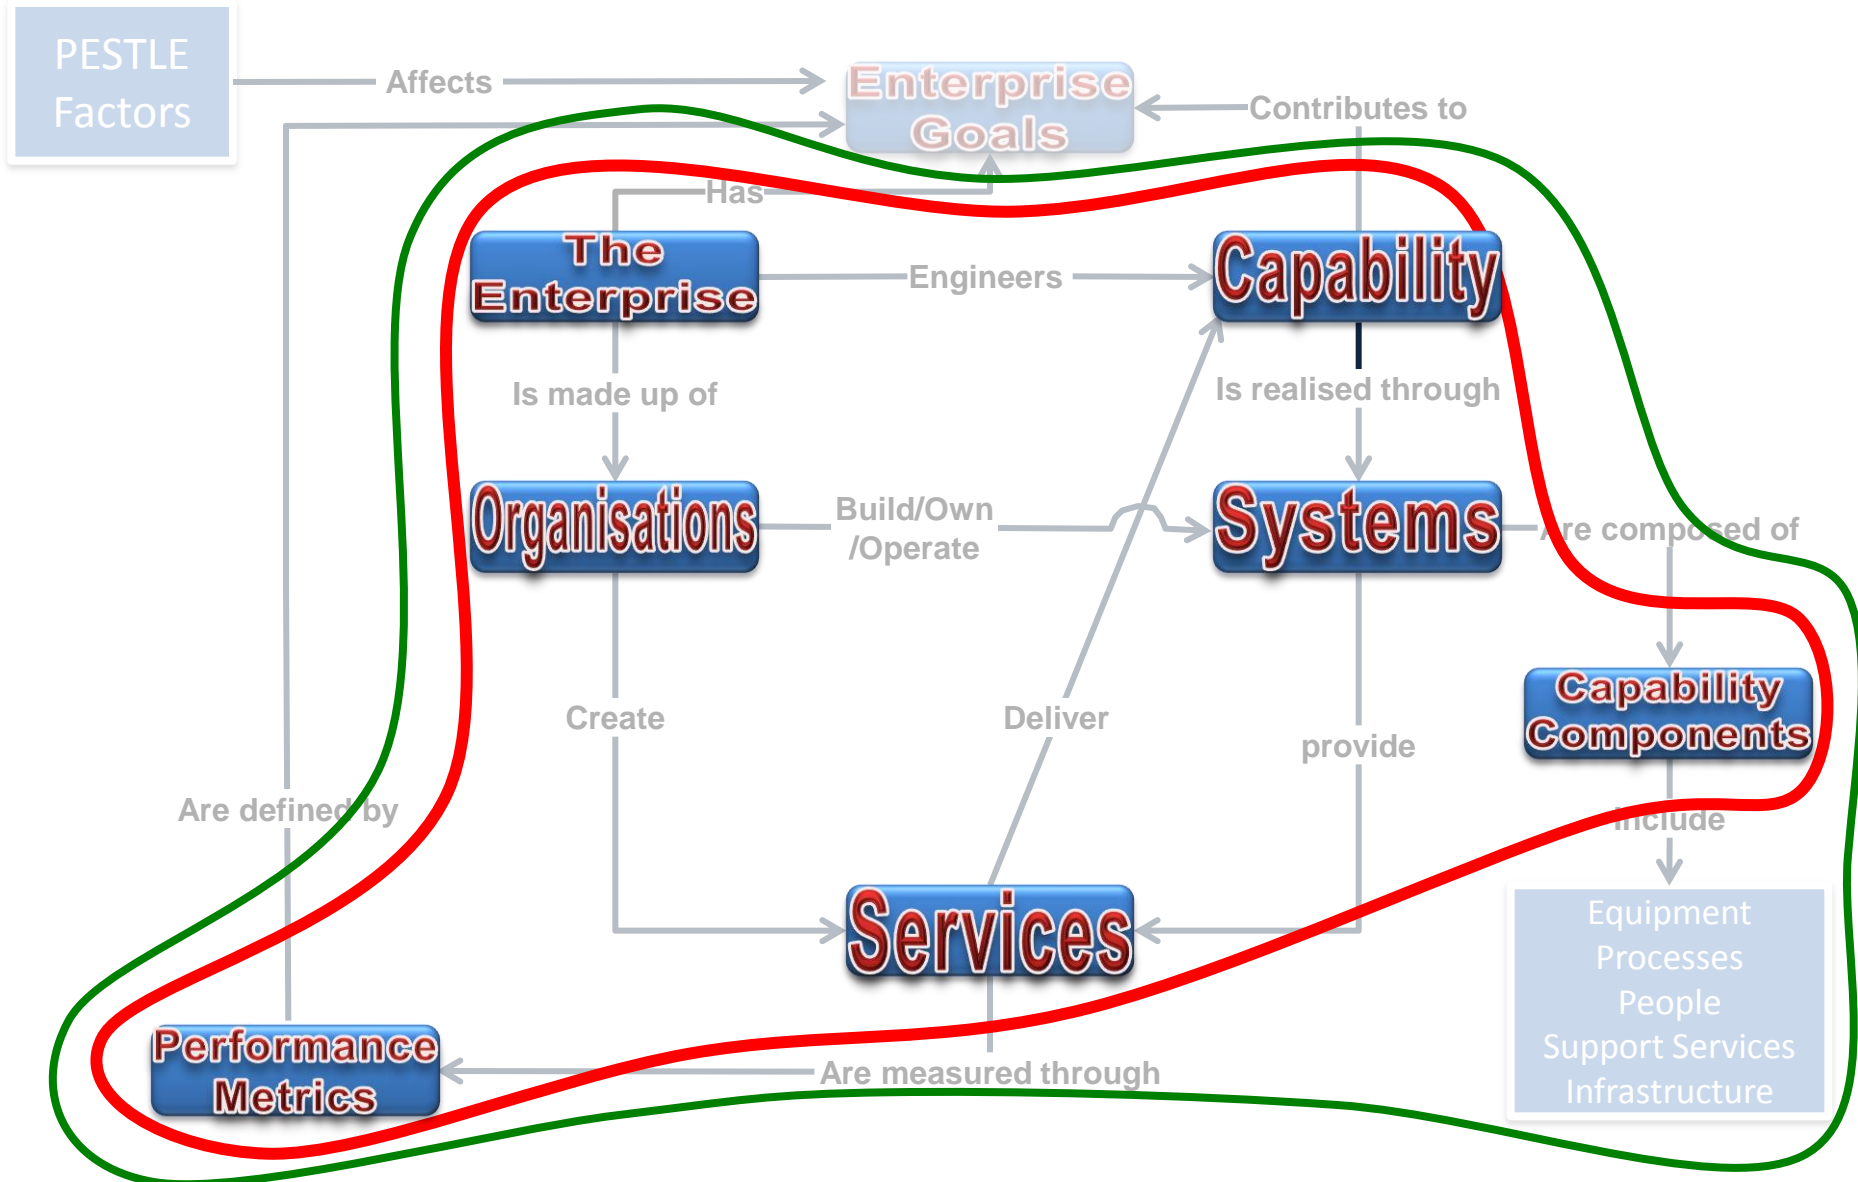

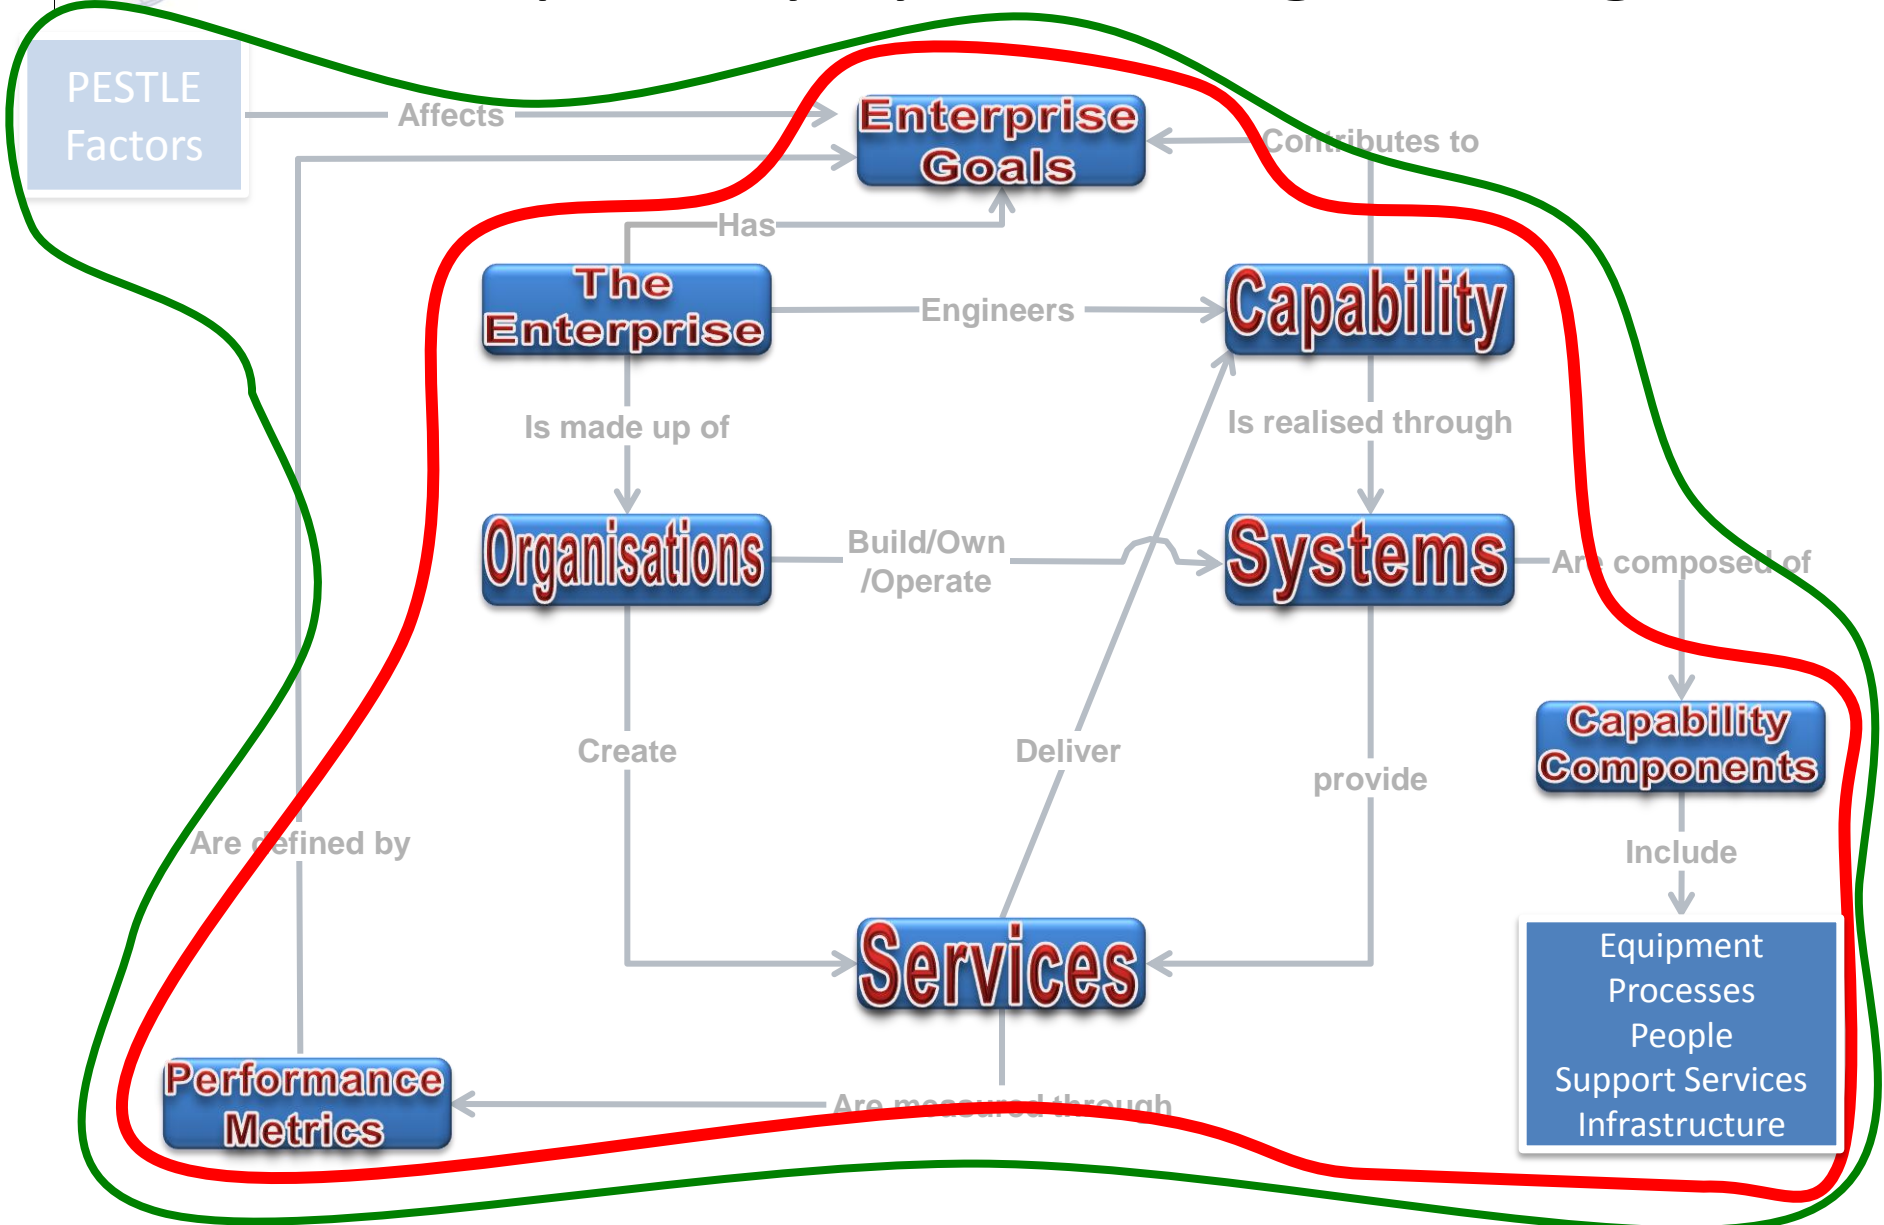

W1: Equipment Capability

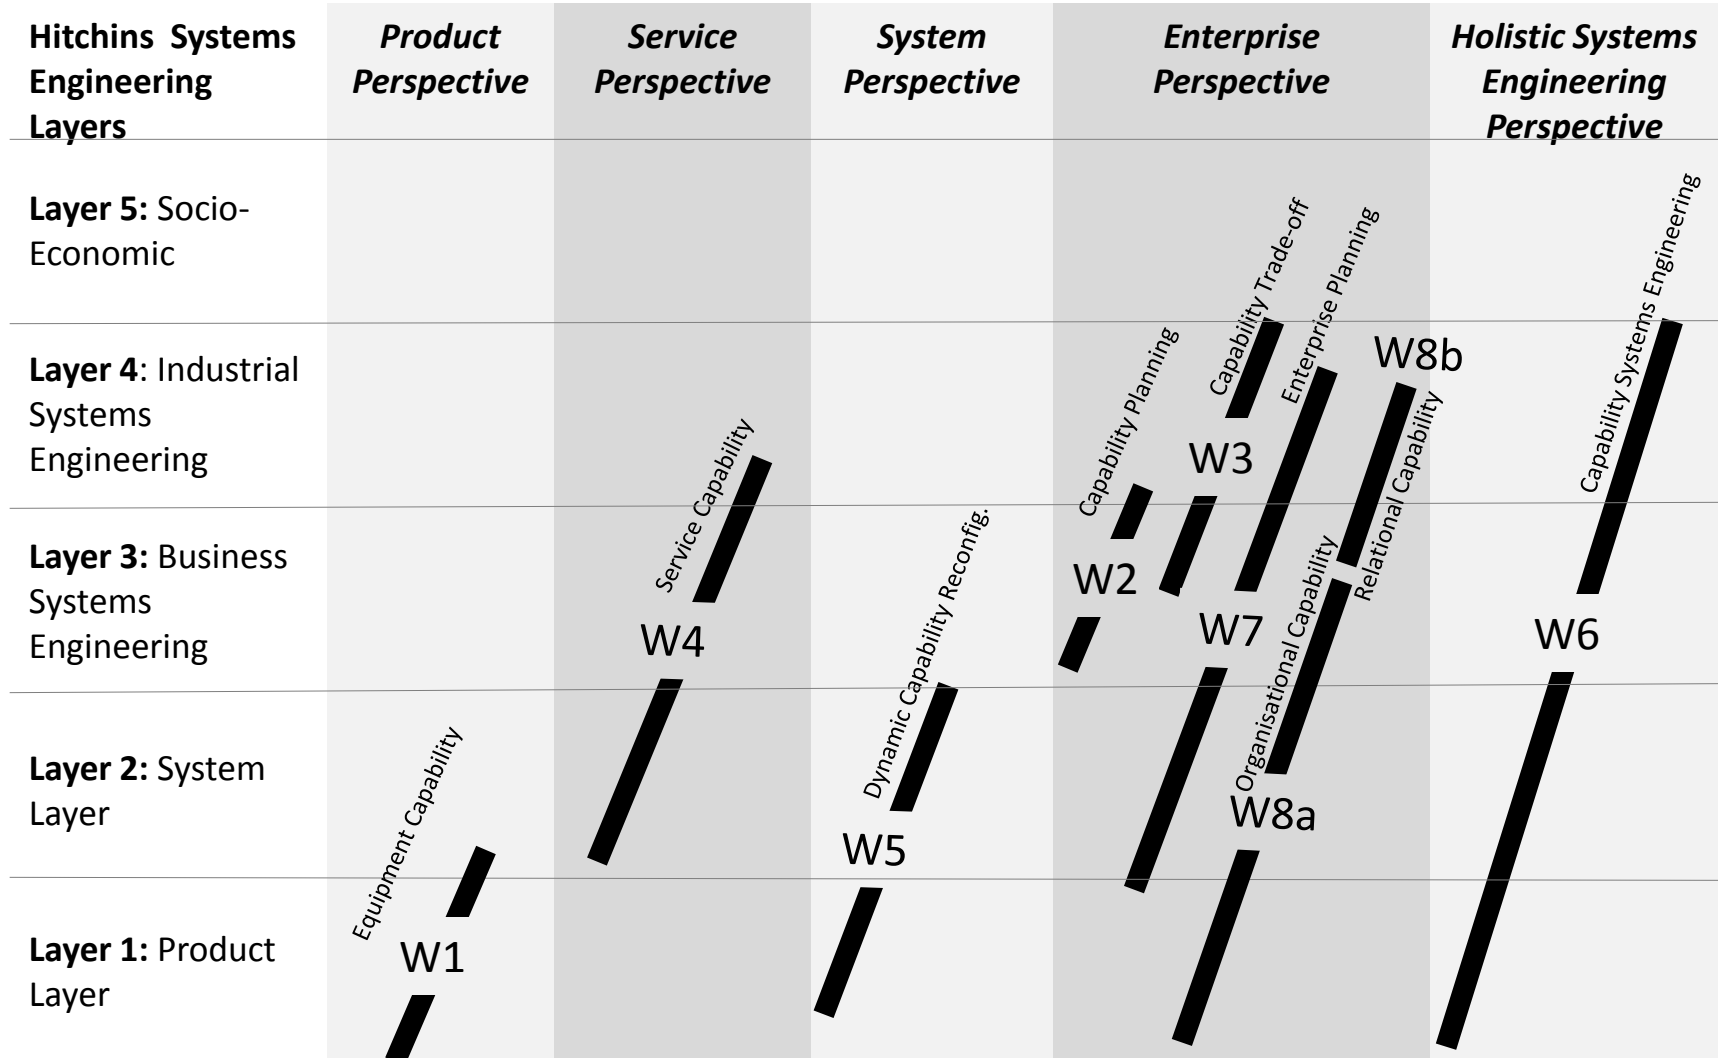

W4: (Contingent) Service Capability

W6: Capability Systems Engineering

Mapping Ws against Hitchins five Layers

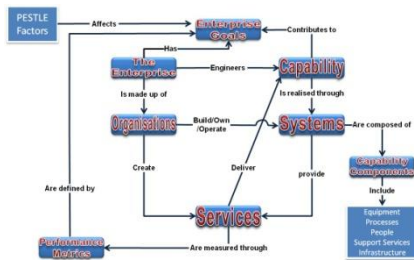

POSITION STATEMENTS

The foregoing has led the Perspectives analysis Sub-group to the following ten position statements

Position Statements (1 & 2)

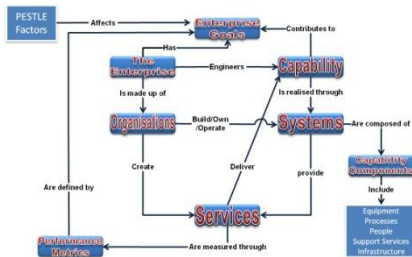

- It is the group's view that capability is the ability to do something; it is not a synonym for a system function or system purpose. Clearly there are some perspectives of capability that contradict this (W1).
- A corollary of the statement above is that capability engineering is significantly different from product systems engineering and broader than (though it incorporates) the process perspective of systems engineering.

Position Statements (3, 4, & 5)

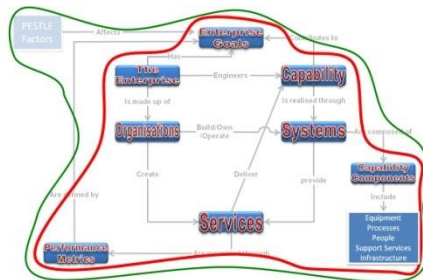

- Capability engineering is very similar in scope to views of systems engineering such as Ring's Value Cycle (Ring, 2002) and layers 1-4 of Hitchins' Five Layer Model (Hitchins, 1994). For subscribers to these perspectives of systems engineering, capability engineering is POSE.
- Capability engineering is the overarching approach that links value, purpose, and solution of a systems problem.
- As such, capability engineering comprises mindset (holistic thinking, assumptions), trade-offs, design, processes, values and policy, and outcomes.

Positions Statements (6 & 7)

- Capability is realised through a combination of components that include hard (equipment) and soft (people and processes) systems together with supporting services and infrastructure.

- The processes for capability engineering are largely the same as traditional systems engineering, but the mindset and system boundary are different.

Positions Statements (8, 9, & 10)

- There are significant practice and examples of capability engineering from (at least) the UK rail provision, defence, and Information Services.
- One's Weltanschauung of capability engineering is clearly dependent on where one draws the systems boundary. It is the view of the Perspectives Analysis sub-group that the most appropriate place to draw the systems boundary for capability engineering is to enclose layers 1-4 of the Hitchins' Five Layer Model of systems engineering.
- Capability and capability engineering are important concepts that reaffirm the holistic view of systems engineering; this may imply the need for further INCOSE guidance at the higher Hitchins' layers (3 and 4).

What next?

- The CWG identifies gaps in current guidance to better support the capability engineering aspects of systems engineering (focus on value)
 - **Further development of key competences for SE practitioners**
 - **The SE Professional syllabus must include the top half of the value cycle**
- The CWG compile/develop an agreed language to describe capability engineering concepts that draws on appropriate accepted systems engineering definitions, where applicable.
- The CWG initiate production of:
 - Publication of detailed guidance on capability engineering
 - Publication of an INCOSE Z-guide on capability engineering
 - Development of conference, workshop, and tutorial presentation materials.

DISCUSSION POINTS

Discussion Points

- How should INCOSE UK Capability working group take this understanding of Capability Engineering forward?

Capability's Engineering
